

SOP for MS in Electrical Engineering

My goal to pursue this Masters Degree in the field of Electrical Engineering stems from the desire of being part of a graduate program only at your institution. I believe that your University offers the needed flexibility for a rapid and vast field.

Also, your research facilities together with your faculty and staff are very excellent. The industry of communications has surely changed our lives for the better. In just a fairly short period of time, it has already significantly changed the way we looked at certain things. It is also an industry which can change what is ahead of us, shaping our future that will soon come. For this reason, my desire to pursue this field as my major stems from the desire to move with the future.

My personal interest in this field started when I was still in High School. It was when technology started a different chapter, making a huge impact on the lives of people. Electrical engineering easily became my first choice for undergraduate studies. Right from the start, it has already fascinated me in so many ways, most particularly its applications. Also, all of the subjects that I have studied include those that laid the bases for my courses.

During the last three months, I have also been part of a project as a trainee at the Institute for Advanced Electronics, working on the design and development team. It may just be a short project but it has already provided me with useful practical experience. It has also given me the confidence to complete a Master's Degree, while kindling my personal desire to complete a research. I believe that by pursuing this MS degree, I can contribute to the needs of this ever developing industry.

SOP for MS in Mechanical Engineering

I have just come into realization that my undergraduate studies will soon be completed in just a few months time. I now see that this is a very crucial phase in my career because I have to decide the specific direction in which I need to move forward to. I am greatly interested in towards the aspect of being involved in an industrial work environment. This is basically the main reason why I am looking forward to pursuing graduate studies. On top of that, there are also factors which have proved to be enlightening in this field. There are a lot of changes in the field of design engineering as well as global industrialization. All of these can make the role of a mechanical engineer an indispensable one.

It is my greatest desire to become a part of this rapidly moving community. In order to attain all of my goals, I have already shown quite a keen interest in the fields of Physics and Mathematics, which have also helped me quite strongly in attaining a good percentage of my grade during my tenth. Since I really love science and technology, pursuing a career in the field of engineering seemed to be almost natural for me. In order to study in this program, I need to overcome certain hindrances.

My undergraduate study has provided me with a comprehensive and wide exposure to different courses which I find really interesting, particularly Machinery Kinetics, Mechanics of Solids, and many more- firmly believe that learning can be done by actually doing it. I find experimentation as a very fascinating aspect that I can get myself involved in. I find that your well reputed institution will provide me with the kind of training that I am looking forward to achieving.

SOP for Masters in Education

It has been my firm belief that life's meaning does not just stem from the actual length of time spent by a person in living, or the abundance that can be acquired, but in the overall wonderfulness and richness of life in itself. As my age increases, a lot of things in my life have also changed. One thing stays constant, however, that is, the fact that I will still continue to insist doing what I really like to do, hoping that one day, all of my endeavors will prove to be of value to the life of others. I often see this as the only available way in which I can completely understand the value of life.

During my undergraduate study, I focused on the field of Economics, achieving an amazing scholastic performance in this area. I received a GPA of 3.44. I have also received scholarships for my academic performance during my four years of undergraduate study. Because of my performance in certain extracurricular activities, I was also awarded as the Outstanding Student in the field of campus activities.

My real interest is not really just in the field of Economics, but also in Education. I can clearly remember that ever since I was still a primary student, I had already cherished a great desire to have a teaching career as shown by the wonderful of my teachers. The reason why I am applying for your University is that your institution comes with a time honored background and history. You offer a promising program, which is highly recognizable with its counterparts within this field.

To me, an interesting shift in the field of Economics to Education, pursuing an advanced career in this field is not really a challenge, but an opportunity I am looking forward to an opportunity to finally experience that.

Statement of Purpose Finance Master

I believe that a Master's Degree in Finance will prove to be a perfect fit for my goals in life due to its overall academic excellence, as well as its focus on corporate finance, and its role on this industry oriented situation that we are living in. I believe that my exposure to the financial service industry will give me with a wonderful opportunity to be able to apply my acquired theory and knowledge in finance. I am planning to utilize these strengths while they relate to my interests.

My passion for the field of and mathematics led me to selecting Electronics and Communications engineer for my undergraduate course. After my graduation, I also continued with my PGDM in the field of Marketing and Finance. I have always found myself enjoying such experience. and have always been strong in particular areas which need problem solving, mathematical and analytical skills. I am extremely to be able to combine my aptitude and knowledge in this aspect.

In order for me to achieve my goals in this career, I have to learn a whole lot more regarding the current techniques and developments in the world of finance, financial applications, financial markets, acquiring the necessary hands-on experience in the field of financial analysis. I believe that a Master's Degree in Finance from your University will give me with the theoretical knowledge and understanding, as well as an In-depth Idea involved In practical approaches in doing research skills.

I am interested in building my skills with thig degree. My goal is to attain a demanding. rigorous and rewarding post within this profession. I know that still have a lot of things to learn. and I very much willing to explore the horizons, making myself very useful in this field,

Statement of Purpose for MS in Computer Science

I can still clearly remember the day just like it was just yesterday. When I was still in my second year back in college, I attempted to send a string of characters showing my name from a computer to another. With the use of an RS-232 cable, I connected the computers, writing the programs necessary, executing them. I also typed my name at one terminal, running the other in order to see the results. I felt that it was magic at that time, being able to see the fast delivery of the string to the other computer.

My interest in the field of applied science can be traced back to my earlier school days. Back in high school, I became really interested with how electronic gadgets work. Afterwards, I started considering it a hobby the fields of building and designing simple circuits. However, along the way, I started to realize that the problem solving feature of creating electronic gadgets was what I really enjoyed best. It seemed that engineering was just a natural choice for a career for me.

For undergraduate studies at the EC department at AA College of Engineering subjects such as C-Programming, Microprocessors. As well as computer networking has interested me primarily. It was as if I felt really awestruck with all of the potentials in these fields. For that very reason. I became really determined to focus myself on microprocessors back in my final year project. I bring with me a strong understanding in Electronics and Computers, as well as an aptitude for team work and teaching, as well as the thirst and desire for knowledge with a desire to learn some more. I am interested in taking with me a network of lasting and strong relationships with my fellow students and teachers. I am hoping that my personal background* as well as my qualifications will be very helpful as I pursue an MS Degree in Computer Science.
